INTRODUCTION

An introductory course forms part of the training in general medicine ward with special stress in five specialties in the 1st year. It includes training in emergency medicine, liver and gastrointestinal diseases, autoimmune and connective tissue diseases, heart diseases and diabetes mellitus and common endocrinal diseases. It also includes 2 months training in Clinical Haematology unit.In the 2nd and 3rd years of training focused on last 5 modules; the 1st 4 of them run parallel course.

Aim

On completion of the educational programme the trainee should :

- Participate in General Haematology Outpatient Clinics
- Be responsible for the day to day management of ward inpatients and day care patients
- Liaise with colleagues in Medicine and consult with other specialties
- Be exposed to all aspects of benign and malignant Haematology.
- Be able to understand the laboratory haematological practice .
- Be able to do common diagnostic and therapeutic techniques required in the practice of haematology
- Have fair communication skills required for the practice of clinical haematology.

The components of training are:

The trainee will spend in **General Medical ward , including medical emergencies**, one year rotating in 6 medical specialties at a minimum of 2 months duration. Throughout this period, the on-call duties shall be carried out in medicine. The aim of the training is to produce the multi-competent junior doctors able to recognize and manage general medicine patients.

• **Clinical hematology modules including laboratory hematology (2 years)**.

During the this period the trainee will:

- Participate in General Haematology Outpatient Clinics
- Be responsible for the day to day management of ward inpatients and day care patients
- Liaise with colleagues in Medicine and consult with other specialities
- Be exposed to all aspects of benign and malignant Haematology, including Thalassaemia, congenital bleeding disorders, thrombotic disorders, palliative care and remission treatments for haematological malignancies like leukaemias, lymphomas and myeloma.
- Electively the trainee be attached either to the Transfusion Department or a stem-cell transplantation centre for three months.
- Present one audit a year and participate in departmental meetings
- The trainee should be guaranteed a minimum of four hours protected time per week to regularly attend the academic meetings within the department.
- The trainee should do or share in at least 50% of the number of required cases.

Program Structure

Program Time Table

Duration of program 3 years maximally 5 years divided into

- Part 1

Program-related basic science courses and ILOs + elective courses
Students are allowed to set the exams of these courses after 12 months from applying to the M Sc degree.

- Thesis

For the M Sc thesis;
MSc thesis subject should be officially registered within 6 months from application to the MSc degree,
Discussion and acceptance of the thesis should not be set before 12 months from registering the M Sc subject;
It could be discussed and accepted before passing the second part of examination)

- Part 2

Program –related speciality science courses and ILOs
Students are not allowed to set the exams of these courses before 3 years from applying to the MSc degree.

n.b. Fulfillment of the requirements in each course as described in the template and registered in the log book is a pre-request for candidates to be assessed and undertake part 1 and part 2 examinations.

Components of Training Programme

Modules/ Units' Titles' list
1- Basics of: Physiology, biochemistry, Pharmacology, pathology, clinical pathology, microbiology and immunology,
2- General medical specialties and medical emergencies
3-Haematopoiesis, Benign RBCs and WBCs diseases
4- Blood clotting and its disorders.
5-Haematological Malignancies
6-Basic Laboratory hematology
7-Transfusion therapy (blood bank) or Bone Marrow transplantation

Basic medical sciences

SPECIALITY	DIAGNOSIS
Pathology	Bone marrow diseases & interpret BM trephine biopsy
	Lymphomas (Hodgkins' Disease and NHL)
	Granulomas including TB lymphadenopathy
	Introduction to immuno-histochemistry
Clinical Pathology	Making and staining of a peripheral blood film
	Setting up the use of a light microscope
	Analysis and interpretation of blood films and differential white blood cell count and red blood cell abnormalities
	Interpretation of bone marrow aspirate
	Diagnosis of malignant haematological disorders
	Aplastic Anaemia and myelodysplastic syndromes
	Interpretation of the results of Platelet function tests, haemostasis and cross matching
	Interpretation of clinical chemistry reports
	Introduction to flow-cytometry

Microbiology & immunology	**Infections in immune deficient patients**
	Disinfection measures
	General bacteriology
	Tuberculosis
	General virology
	Hepatitis viruses
	Viruses inducing haematological diseases (HIV, CMV, EBV, Parvo v..)
	Common systemic fungal infections
	Immune reactions and autoimmunity
	HLA typing
Clinical Chemistry	**Cell Biology and biomarkers**
	Nutrition and deficiency disorders
	Enzyme deficiency disorders
	Metabolic haematology disorders
Physiology	**Physiology of blood and hemostsis**
	Physiology of Cariovascular system
	Physiology of Respiratory system
	Physiology of Liver and GIT system
	Physiology of Kidney
	Physiology of endocrine system
Pharmacology	**Pharmacology of anaemia, iron, folic acid and B12 supplementation**
	Outline the mechanisms of action of pharmacological platelet inhibitors
	pharmacological and nonpharmacological clotting inhibitors
	Cancer chemotherapy for haematological malignancies
	Hemoglobinopathies and use of Hydroxyurea
	Hemolytic Disorders: Drug-Induced Hemolytic Anemia Medications in G6PD Deficiency
	Medication Causes of Neutropenia
	Medication Causes of Lymphadenopathy
	Drug Induced Platelet Dysfunction
